

# Global IoT Data Roaming

Connect wherever your  
business takes you  
in Africa

We care about your company's mobile connectivity needs. With 10 years of experience, our reliable Global Roaming solutions are your key to Africa and the world.

One platform  
for a global business

Turnkey API-Based  
solution

Multi-Network  
connectivity in more  
than 200 countries

## What is Global IoT Data Roaming?

Deploying devices across many countries requires careful planning and a data roaming solution that is suited for the specific project.

There are many options when it comes to global mobile data connectivity.

Things to consider include in-country reliability, device compatibility, dual-network coverage, data costs, real-time control to avoid any surprises, and technical support that understands roaming issues.

With our global IoT connectivity solutions, monitor and manage your roaming data SIM cards easily on a proven online platform.

# More than 10 years of experience in African data roaming

Connect your devices in  
200+ countries on 700+ mobile networks

Deploying connected devices across Africa and on a global scale comes with challenges.

SIMcontrol's online platform gives you software-powered control and advanced features that makes it the preferred option for managing data roaming device SIMs.

SIMcontrol offers three global roaming network options, optimised for African or Global roaming. Reliably connect your IoT/M2M devices even in the most difficult and remote areas.

Experienced, reliable and high-quality connectivity through carrier-grade global mobile networks

## Our Partners

Through our partners Vodafone, BICS and Flolive, we provide secure and reliable global roaming service at competitive data roaming rates.

# Why SIMcontrol?

There is not one global SIM that is suitable for every application. We have the experience to advise on different data roaming options. SIMcontrol is a tried and tested platform with proven success for our customers.

## Be in control

With our easy to use, online SIM management platform you can manage all your SIMs from various networks in one place.

## Limit your mobile spending

Eliminate the risk of SIM abuse and save on data by capping your costs on SIM level. Never experience bill shock again. No contracts and no long term volume commitments means you only pay for what you need.

## Quick and Easy

We assist with SIM card supply, provisioning and activation. Pay only for what you need, when you need it.

## Reliable support and maintenance

With our technical team specialized in telco, we quickly identify your problem and provide you with assistance you need.

# Global Roaming

## ► Key Benefits

### Network

- Dual network in most countries.
- Single SIMs with global reach
- Built for IoT and optimized for African or Global roaming
- Advanced API for integration
- Test devices locally before deploying

### Spend Management

- No long-term contracts
- Competitive data roaming rates for African countries
- Detailed data balance and usage reporting
- Reduce the risks of global IoT deployments. No “bill shock”

### **Flexibility**

- Multiple Networks
- Custom networking, security and firewalling options
- Manage different SIM types from all major networks on a single online platform.

### **Support**

- Fast SIM supply
- Specialist Tier-1 technical support
- Easy self-help troubleshooting including session data

## **▶ Key Features:**

### **Self-Help Platform**

- Online SIM management platform
- SIM-level insights
- Advanced reporting & analytics

### **Advanced Networking**

- Cloud based scalable networking infrastructure
- Maximised 2G, 3G or 4G cellular coverage (local network dependent)
- Data session history
- Online SMS function for remote device commands and "Over-The-Air" configuration
- Built to scale as you grow

### **Automated Monitoring**

- Seamlessly roam between mobile networks and countries
- Instant SIM activation
- Automatic suspension when reaching quota limits

# Seamless Global IoT Connectivity for Enterprises

## About us

*"We are an enabling layer between the mobile operators and IoT businesses."*

Flickswitch has for over 10 years assisted companies to deploy connected devices at scale. Flickswitch manages connected device SIMs for hundreds of companies ranging from M2M, IoT, Fintech & POS, Security, Agritech, Retail and many other mobile data applications.
