SIM CONTROL

▪ Business Prepaid Solution

Combine the flexibility of prepaid with the power of automated SIM management. Easily monitor and recharge large numbers of company SIMs deployed in devices. Get full visibility and usage reporting across all major mobile networks.

What is Business Prepaid?

How does it work

Take control of your data SIM fleet by managing all your SIMs on one single online platform

Set up custom SIM-level spend limits.

SIMcontrol monitors your SIMs and ensures you only spend as much as you plan to.

Prepaid has been a staple in emerging markets for many years, often viewed as something only consumers use, and not easy to manage at scale.

With SIMcontrol, a prepaid SIM can be automatically monitored and recharged based on defined business rules from one single account. This gives businesses of all sizes and industry sectors a flexible, reliable and cost-effective mobile connectivity solution.

SIMcontrol makes sure SIMs are always recharged and online. It allows companies to create custom usage and spend limits on SIM level, making sure SIMs don't use more than what they are allowed to.

Detailed reporting gives insights into your company's SIM base, while enterprise-grade features include device over-the-air setup, SIM profile lookups, advanced API and legendary technical support that understands business & IoT connectivity issues.

Why Business Prepaid?

Business Prepaid allows you to manage large fleets of existing prepaid SIMs from all mobile networks in a way that makes sure they are always active but never abused. It is ideal for deployments where companies require flexibility in terms of contract commitments, need to manage day-to-day spend, or want the benefit of deploying SIMs from different networks - all centrally managed and automatically monitored.

Using the SIMcontrol online platform, prepaid SIM card balances are automatically monitored and recharged up according to your custom recharge rules. It enables you to build your own data packages that can be changed or stopped at any time.

- All networks, one platform
- API for integration
- No-long term contracts
- Bulk SIM supply & activation or bring your own

The flexibility of prepaid with the power of enterprise SIM management

Various SIM management issues can be understood, anticipated or prevented by using the SIMcontrol platform. Having real-time control and management capability over deployed SIMs becomes a critical success driver for both technical reliability and cost management. Best of all, there are no long-term contracts and we supply active SIMs in bulk.

Supported Networks	vodacom	MTN	Cell C	Telkom

WHY SIMCONTROL

SIMcontrol is an alternative to dealing with mobile networks directly. We offer a range of competitively-priced mobile SIM options, including unique products and features not always available directly from mobile networks.

SIMcontrol is a tried and tested platform with more than 12 years of proven success for businesses where reliable mobile network connectivity is critical. It is ideal for IoT and other devices that require reliable 2G, 3G, LTE or NB-IoT cellular connectivity.

KEY
BENEFITS

Be in control
With our easy-to-use, online SIM management platform you can manage your SIMs, data, and users.

Limit your mobile spend
Eliminate the risk of SIM abuse and save on data spend by capping costs on SIM level. Pay only for what you need, when you need it. Never experience bill shock again.

Flexibility
Build your own packages. No contracts or data volume commitments mean you can add or remove SIMs as needed with the click of a button.

Quick and Easy
We assist with SIM card supply, provisioning and activation.

Reliable support and maintenance
With our technical team specialized in business mobile connectivity and IoT, we quickly help identify your connectivity problems.

Business Prepaid not for you?
